

### Scenario:

You are a student who is a freshman in college. You find yourself being late for classes every day and missing a few minutes of the beginning class. So to improve that you would like to download the app called Class Tracker so you can manage your time and it can help improve time management and you always be on time unless there is traffic or something came up.

Task 1: Download the app and add all your information like location, schedules, and much more.

Task 2: Set a reminder whenever you would like to be reminded.

Task 3: rate this app upon your own experience and be honest so it can help future users to understand what to expect from this app.

### Notes

What changes you should make to your application(min 3 Things):

- Home page needs to be more specific like what is this app about
- Let users know that this app requires your location 24/7 or whenever you are going to use it.
- In profile, I need to allow the user to enter their college information like address, phone number, etc.

What do you need to keep the same for your application(min 3 Things)?

- Guide really helps navigate this app so that would remain the same.
- The way I allow the user to enter their schedule would remain the same too.
- Allowing users to change and add schedule would remind the same too.
